SUMMARY

Aspiring Data Analyst and 2nd-year B.Tech (CS & AI) student skilled in Python, Tableau, and Google Sheets. Experienced in end-to-end analytics — ETL engineering, EDA, statistical analysis, and interactive dashboard delivery. Strong focus on converting raw data into actionable business insights through scalable pipelines and data-driven reports.

TECHNICAL SKILLS

- **Languages:** Python, SQL, C++
- **Libraries:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
- **Visualization:** Tableau, Google Sheets, Excel
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Other:** EDA, ETL Pipelines, Feature Engineering, Hypothesis Testing, KPI Design, Dashboarding

PROJECTS

Income Insights & Prediction Analysis — Adult Census Dataset ■ [GitHub](#)

Tools: Python, Pandas, NumPy, Matplotlib, Seaborn, Tableau, Google Colab, Excel

- Built a production-ready ETL pipeline on 48K+ records — handled imputation, schema standardisation, duplicate removal, and binary encoding.
- Performed EDA across 15 features; derived age buckets, education tiers, and occupation segments for structured demographic profiling.
- Applied correlation analysis and hypothesis testing to confirm education level and executive roles as primary income predictors (>\$50K).
- Found ~8.7% capital gain holders deliver a 41% probability lift in high-income classification — the strongest financial signal in the dataset.
- Built 3 Tableau dashboards with dynamic filters, 5 KPI cards, treemaps, stacked bars, and scatter plots; published to Tableau Public.

TTC Subway Delay Analysis — Toronto Transit Commission (2025) ■ [GitHub](#)

Tools: Google Sheets, Excel, Pivot Tables, VLOOKUP, ARRAYFORMULA, Statistical Analysis

- Cleaned 25,716 delay records (411K+ data points) across YU, BD, SHP lines; resolved 36.8% missing direction and 41.9% missing gap values.
- Built a 4-tab Google Sheets pipeline using VLOOKUP, UPPER(TRIM()), and ARRAYFORMULA to standardise 20+ inconsistent station naming variants.
- Engineered 5 derived columns: Delay_Category, Time_Period, Is_Delayed, Month, and Hour for temporal and severity-based segmentation.
- Identified YU line driving 50.9% of incidents, Wednesday as peak delay day, and top-5 stations accounting for 17% of all recorded delays.
- Delivered a stakeholder-ready report mapping delay hotspots with actionable scheduling and maintenance recommendations per affected line.

EDUCATION

Bachelor of Technology — Computer Science & Artificial Intelligence

GPA: 8.04 / 10

Newton School of Technology, Rishihood University | 2024 – 2028

Class XII (Intermediate)

90.0%

FIITJEE Junior College | 2022 – 2024

Class X

92.6%

Sri Chaitanya High School | 2021 – 2022

ACHIEVEMENTS

Delivered 2 end-to-end analytics projects independently — raw ingestion → ETL → EDA → statistical analysis → dashboard → business insight report.

Comfortable across the full analytics stack: Python for processing & modelling, Tableau for dashboards, Google Sheets for pipeline automation.

Strong competitive programming foundation with consistent participation in algorithmic contests, reflecting solid CS and problem-solving fundamentals.
