

AGRIMA GUSAIN

Dehradun, Uttarakhand (India) • ag.agrimagusain@gmail.com • [LinkedIn](#) • [GitHub](#) • [Kaggle](#) • [Portfolio](#)

SUMMARY

Aspiring Data Analyst and 2nd-year B.Tech (CS & AI) student skilled in **data analysis**, **EDA**, and **visualisation**. Proficient in **Looker Studio**, **Power BI**, and **Tableau** for building dashboards that uncover trends and support data-driven decision-making. Experienced in end-to-end analytics pipelines — from raw data preprocessing and statistical analysis to predictive modelling and interactive dashboard delivery.

TECHNICAL SKILLS

- Languages:** Python, SQL
- Libraries:** Pandas, NumPy, Matplotlib, Seaborn
- Visualization:** Tableau, Power BI, Data Studio
- Databases:** PostgreSQL, MongoDB, DBMS
- Tools:** Excel, Google Sheets, Git, GitHub, Google Colab, Predictive modelling

EDUCATION

Rishihood University (Newton School of Technology)
B.Tech in Computer Science & Artificial Intelligence

CGPA: 7.3 | 2024 – 2028 (Expected)

PROJECTS

Crime Forecasting & Trend Analysis — FBI Crime Data

[Live ↗](#) [GitHub ↗](#)

Tools: Looker Studio, Python, Google Colab, Google Sheets, Excel

- Pre-processed ~400K crime records in Google Colab; sampled 60K rows and performed EDA across temporal, spatial, and hourly dimensions.
- Identified CBD as dominant hotspot (2,035 cases, 2.5× higher than next area); peak crime at 6 PM; Theft from Vehicle = 36.7% of all incidents.
- Built interactive Looker Studio dashboard with geo heatmap, 6 KPI cards, YoY trend charts, and growth-based crime forecasting up to 2015.
- Recommended hotspot patrol strategy for 3 PM–6 PM peak window based on temporal and spatial clustering insights.

Income Insights & Prediction Analysis — Adult Census Dataset

[Live ↗](#) [GitHub ↗](#)

Tools: Python (Pandas, NumPy, Matplotlib, Seaborn), Google Colab, Tableau, Excel

- Cleaned and engineered features on 48K+ records — created age groups, education tiers, and occupation segments for structured analysis.
- Conducted correlation analysis and hypothesis testing across gender, marital status, and work hours to identify key income drivers.
- Built a classification model for income prediction (>50K) with clustering into segments such as 'Emerging High Earners'.
- Developed Tableau dashboards with dynamic filters, KPI cards (High Income Rate, Gender Income Gap), stacked bars, and line charts.

CERTIFICATION

- Supervised Machine Learning: Regression & Classification** — DeepLearning.AI & Stanford University, Coursera (Jan 2026)
- Introduction to Databases for Back-End Development** — Meta, Coursera (Jul 2025)
